BAY AREA ECONOMY

The Economic Profile is one of a series of three publications presenting population, housing, and economic data by census tract for the entire Bay Area. The variables have been selected from the U.S. Census Fourth Count Population and Housing summary tapes. They were chosen for their value identifying socio-economic characteristics of census tracts. The variables in this publication describe occupational and labor force characteristics of the population reported by their place of residence.

The census tract number includes the identification in the last two digits of tracts that have been split from original single tracts. For unsplit tracts, the last two digits are zero. The definitions of the variables are listed below.
